

# WHY SHOULD YOU TRY THE GEARMASTER?

**It is the most helpful instrument for heavy vehicle driving to come along in decades.** It simply makes driving easier, safer and more comfortable. You have to drive it to believe it!

**It's an investment that pays for itself in:**

- **Fuel efficiency** – You will always know if you are in the most effective gear for your vehicle speed and, if you are not, you can see immediately which gear would be more efficient. As you accelerate or decelerate, you can see the gears approaching your “sweet spot” and you can precisely time your shift. Studies show that correctly managing your transmission can result in up to four percent improvement in fuel efficiency.
- **Less wear and tear; lower maintenance and downtime costs** – It goes without saying that if you can synchronize your engine to every shift, you can minimize wear and tear on the clutch and reduce damage to the transmission and the drive train. Compare the cost of a GearMaster to a new clutch or a transmission rebuild.
- **Safety** – No driver *plans* to have an accident. Yet accidents happen – especially when a driver’s attention is diverted from traffic by such things as shifting and gear recovery. It is estimated that driver distraction has become a major factor in trucking accidents. Now imagine that you never had to guess what gear to select and that you always knew how to synchronize your engine to your target gear. No more guessing, hunting, grinding or bumping gears! Keep your attention on the road and shift with confidence. One avoided accident would pay for the GearMaster many times over.
- **Faster and more effective training** – Students and trainees grasp much more quickly the concepts of shifting and transmission control. This lowers stress and enhances the entire training program.
- **Greater Driver Satisfaction and Reduced Turnover** – If you are a fleet and are concerned about driver turnover, providing GearMasters to your drivers helps make the driving experience more enjoyable and less stressful. It is another way you can show that you care about your drivers’ comfort and welfare.

**An alternative to AMTs** – The GearMaster delivers virtually all the advantages of Automated Manual Transmissions with none of the drawbacks. It takes the guesswork and intimidation out of shifting at a fraction of the cost. It is quickly and easily moved from truck to truck and requires no tools or modifications to the vehicle. Because there are no moving parts to break down, repairs and downtime costs are nil. The GearMaster is warranted for a full five years.

**Call today to arrange for a no-cost, no-obligation demonstration!**
